texlogfilter

NAME

texlogfilter -- filter latex engines output or log file

SYNOPSIS

```
texlogfilter [options] file

latex file.tex < /dev/null | texlogfilter

texlogfilter --help
```

DESCRIPTION

Filter latex engines output or log file. For latex, pdflatex, lualatex or xelatex output or log file.

Without input file, standard input is used.

OPTIONS

```
--help                : print this help

--box                 : show box warnings
--no-box              : mask box warnings

--ref                 : show reference/citation warnings
--no-ref              : mask reference/citation warnings

--filename            : print current file name
--no-filename         : do not print current file name
--files-ext=string    : regex pattern used to match files extension
(default: $extpattern)

--skips               : indicate skipped lines
--no-skips            : mask skipped lines
--skip-marker=string  : marker used to indicate skipped lines (defaut:
 $skipmarker)

--add-filter=string   : add user filter pattern (as perl regular
expression)

--full-log            : show full log (don't filter - only colorize
latex engine output)

--errors-color=string
--warnings-color=string
--infos-color=string
--skips-color=string
--user-color=string   : colors used for errors, warnings, informations
 and skipped lines
```
